Dear Hiring Professional:

I am actively seeking employment in the Web/Software Development field and am very interested in interviewing with your organization. I believe my education, recent work experiences and programming projects, and personal characteristics uniquely qualify me to join your team.

I am currently working for CCMA in Buffalo, NY as a Web/Software Developer. During my time here I've completely rewritten the company intranet, moving to a new language that offers more stability and greater ease of updates. I've also added new functionality to the intranet, including allowing users to query our data with easy-to-use filters. The look and feel have also been improved and the site has been optimized for mobile users.

Prior to this, I worked for Yahoo! in Lockport, NY as a Network Technician where I configured network settings such as IP configuration and DNS for servers/switches; laid copper and fiber optic cable for newly installed servers; wrote a variety of terminal scripts to assist in networking operations and to optimize repetitive processes; and wrote, developed, and implemented company-wide auditing scripts/user interfaces to simplify inventory management for employees.

I am proficient in the following languages and technologies: Python; Javascript; Node.js; React; Vue; React Native; Nativescript; Nuxt; Django; Flask; JQuery; PHP; Ruby on Rails; VB.NET; Perl; Java; C; C++; C#; SQL; MongoDB; NoSQL; GraphQL; REST API's; Bootstrap; CSS; SCSS; HTML5; Git; Visual Studio; Eclipse; Unity; Linux; Windows; Mac OS; and Microsoft Office. Some of my recent projects include a Node.js module/CLI tool to programmatically implement trading strategies of options and equities using the Robinhood Brokerage web API, a Twitter Marketing Application to collect a database of relevant potential clients via the Search API, and a Server Auditing System for Yahoo! that easily verifies wiped drives and server serial numbers to prevent data leaks during shipments and to ensure inventory data consistency.

I enjoy working at a fast pace while maintaining a high degree of accuracy. I am very detail-oriented, strive to find ways to improve work systems and processes, am a fast learner, love to solve problems and enjoy being part of a team. Outside of the workplace I write and produce music, perform as a DJ, and lift weights.

I graduated Cum Laude from the University at Buffalo with a Bachelor's Degree in Computer Science. I also have an Associate's Degree from Niagara County Community College in the same field. My interests range from web design to software development/programming. I am a hands-on learner, always looking for better ways to do things, and desire to be involved with a business that encourages creativity and initiative.

Thank you for your consideration.

Yours Truly,

Edmund Pfeil
